High	Low
<ul style="list-style-type: none">• Curious• Imaginative• Creative• Open to trying new things• Unconventional	<ul style="list-style-type: none">• Predictable• Not very imaginative• Dislikes change• Prefer routine• Traditional

Individual Work Performance

Individual Work Performance Questionnaire(IWPQ)

IWPQ consists of three key pillars:

Task Performance

Task performance refers to the proficiency with which an employee performs central job tasks. A high value can be achieved for example by keeping knowledge up-to-date, completing job tasks, working accurately and neatly, planning and organizing and solving problems.

Contextual Performance

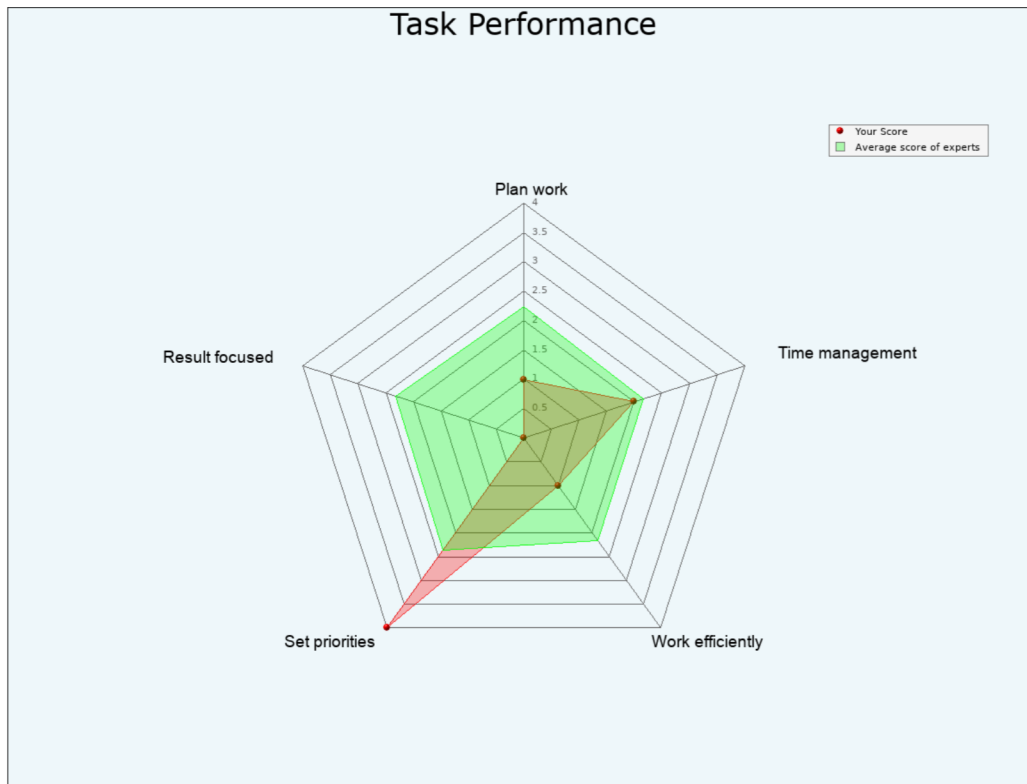

Contextual performance refers to employee behaviors that support the organizational, social, and psy-chological environment in which the central job tasks are performed. Employees with a high value in contextual performance show high initiative, are proactive, cooperate with others and show high en-thusiasm. Contextual performance includes tasks beyond job duties.

The distinction with task performance is that in contextual performance the effective functioning of the organization is promoted, but not necessarily with a direct effect on workersâ€™ productivity.

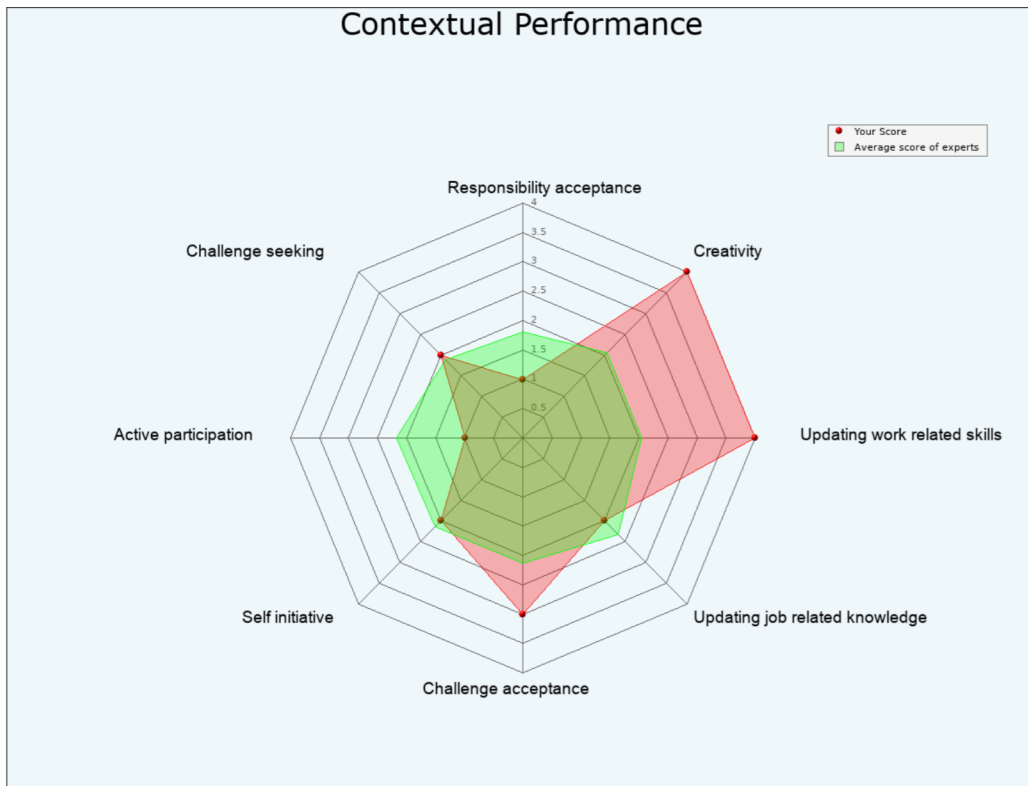

Counterproductive Behavior

Counterproductive work behavior refers to behavior that is harmful to the well-being of the organization. People with a value show unreasonable behavior, do tasks incorrectly on purpose and misuse privileges. Besides, presentism and complaining can be often observed.
